

## ABSTRACT

An imaging device having a removable media interface. The removable media interface can read from and/or write to the removable media. The removable media interface  
5 can be directly integrated into the imaging device or in can be indirectly coupled to the imaging device. The removable media can be used to, among other things, update codes on the imaging device, configure the imaging device, provide user authentication, provide access to other information, such as an address book, encryption, personal preferences, and/or documents. Documents or other stored information can be written to the storage device at a  
10 remote location or written to the storage device at the imaging device.
